INTRODUCTION

This solution only works when connecting from an external network (not when working from within the UZH network).

To connect via FTPS it is necessary to install a FTP client software, for example Filezilla.

Step 2 — Connect to server

- In the FTP client, specify the server address: **ftps:**//**ftp.core.uzh.ch**
- Use your CORE account credentials to connect to the server.
- The port is: 990
- Your FTP client software will ask you to verify the certificate. If it mentions ftp.core.uzh.ch and if its issued by the University of Zurich / DigiCert everything should be fine.
- Please be aware that you only have read access to the ftps server (no upload, modification or deletion of files is possible).
- Access from within the UZH network is not possible via FTPS.
