INTRODUCTION

For acquisition of large data sets (e.g. multipositions, timelapses or large volumes) it is recommended that you use the available X: (cache) drive. By doing so acquisition and saving is not limited by the network speed. Transfer of the files can be initiated through our Datamover solution via Citrix.

Step 1 — Define storage location in "scanR"

- Within the "scanR" software define where your data should be saved:
 - In the Acquisition tab, define your destination folder for saving.
 - Choose "automatic_transfer (X:)" and generate a new folder.
 - Finally press "Ok".

Step 2 — Open "Datamover" for automatic transfer

• You can now set up/start your experiment and acquire your data.

A Once you are done, please remove your sample and clean the microscope appropriately.

- Close the "scanR" software.
- Open "Citrix Receiver" directly on the computer and log on.
 - Optional You can also access Citrix from your own computer provided you have installed the Citrix client. Check out <u>How to section</u> for more info.
- Select the "CORE Datamover" application.

Step 3 — Request automatic data transfer

You will get a mail within 15 minutes. OK Request
			Exit

- Select desired "Data Mover", in this case "Olympus scanR".
- Press "Request".
- You will receive a confirmation email within 15 min.
- Additionally you will receive an email once the transfer has started and another one once it is finished.
- Finally your data will be available in your CORE "data" folder.
- If you do not receive an email after your request or if you need further support, please contact us at it@zmb.uzh.ch
