Step 1 — Save your data

- Go to the **"Open projects"** tab.

- Right-click on your data file and give it a meaningful name.

- Click on the disk button to save the data. Alternatively right click on the specific "project" and choose "Save as..." from the drop down menu.

- Please save your data on your core storage (network path: **"\\files.core.uzh.ch\"**)

- *Please follow our instructions here on how to access your data.*

Step 2 — Save your settings

(i) You can save your settings and reuse them by loading them in your next imaging sessions. By default the following settings will be loaded: laser intensities, detector settings, averaging and accumulation settings.
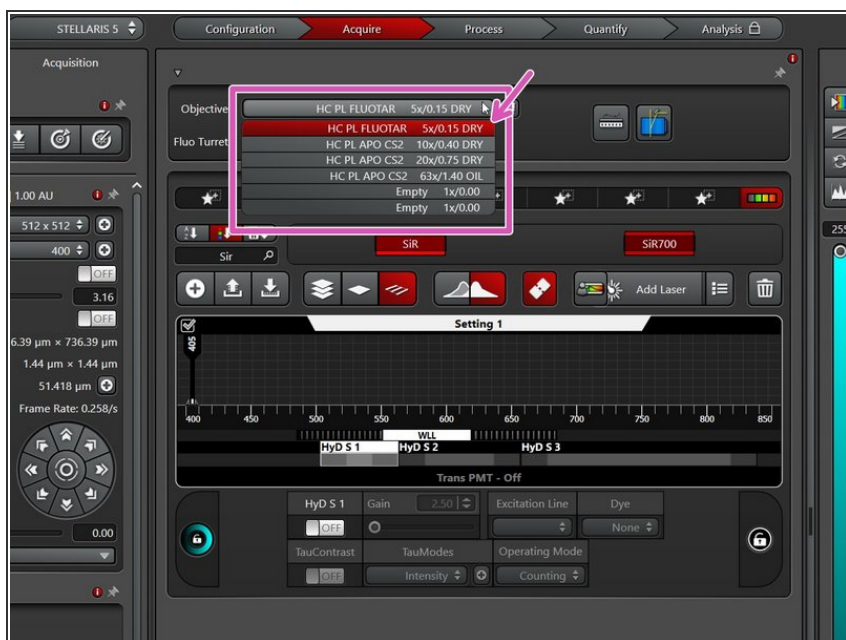

- **Save** your **(sequential) scan settings** if applicable.
  - In order to retrieve your saved scan settings in your next imaging session click **"Load"**.

Step 3 — Clean the objectives

- **Lower** the **objective** and remove your sample.

- **Clean** the immersion objective(s) you have used with the available **"KIMTECH" wipes** and **100% EtOH**.

  ⚠ Always clean the lenses in concentric circles and from the center to the edge. Clean also the sides of the objective(s).

ⓘ *Please also take care that immersion media has been cleaned off of all the other microscope parts which got in touch with.*

Step 5 — Lasers and closing the "LAS X" software

- Go to **"Configuration"** and choose **"Laser Config"**.

⚠ Check in the booking system if there is another booking within the next 2 hours.

- If **YES**:
  - keep the lasers **"ON"** or put on **"standby"**,
  - **close** the **"LAS X"** software and **Sign out** of your Windows profile.

- If **NO** :
  - **switch OFF** all lasers ,
  - **close** the **"LAS X"** software, **shut-down** the **PC** and follow the next step.

Step 6 — Switching OFF hardware

⚠️ Only follow this step if there is no booking within the next two hours.

● Turn off the **Laser key** (control unit next to the microscope) and switch OFF the **"Laser"** and **"Power "** switches.
